

Hello students, welcome to the website for learning how to graph parabolas. I will explain the assignment instructions on how to graph parabolas using the website and other classroom resources. If you would like to read the instructions, please click the link above.

First, you should read through the home page and read all directions given. Then, you are to follow through each section in the order presented. It's important that you do not go out of order: Section 1, then 2, then 3. Once each section is completed, you are to take a quiz at the end to ensure that you understand the course material. You must score at least a 80% on the quiz, so if needed, review missed questions and revisit the appropriate section to review the material.

If extra help is needed, each section has extra resources at the bottom of the page. These are great practice tools as well as review for future exams, so do not skip over.

Remember: this unit is self-directed. Independently, you should be able to work through all the steps by yourself by reading the instructions, working out examples, and using video review for extra help. If you need additional assistance, you're welcome to ask me in-class or through email.

Thank you for listening to all of the instructions, I look forward to helping you understand how to graph parabolas.
